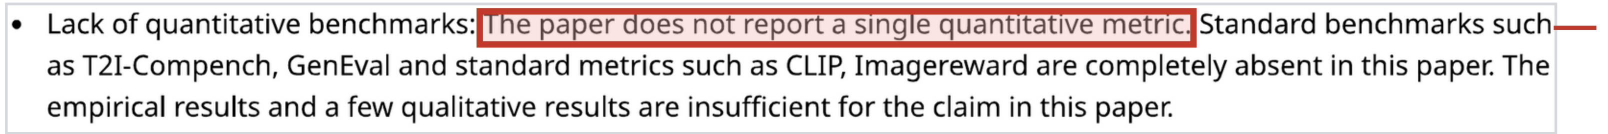
G4: Standard benchmarks and metrics

PrzE weakness 1 and question 1, UHz6 weakness 1 · status: pending (Table 2 is rendering)

THE REVIEWER'S POINT

PrzE, weakness 1



- Lack of quantitative benchmarks: The paper does not report a single quantitative metric. Standard benchmarks such as T2I-Compench, GenEval and standard metrics such as CLIP, Imagereward are completely absent in this paper. The empirical results and a few qualitative results are insufficient for the claim in this paper.

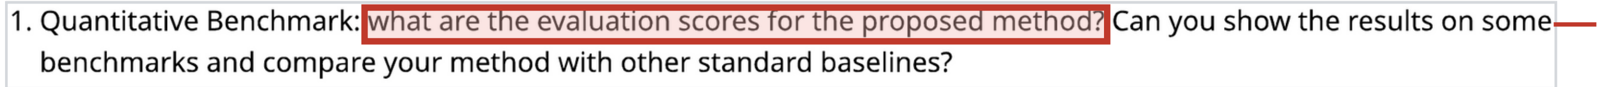
PrzE, question 1

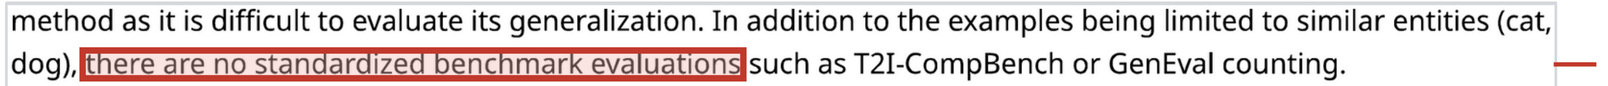


1. Quantitative Benchmark: what are the evaluation scores for the proposed method? Can you show the results on some benchmarks and compare your method with other standard baselines?

P-Q1

Reviews.pdf, page 2 (no text layer; passage located by OCR)

UHz6, weakness 1



method as it is difficult to evaluate its generalization. In addition to the examples being limited to similar entities (cat, dog), there are no standardized benchmark evaluations such as T2I-CompBench or GenEval counting.

no metric

THE SUBMITTED WEAKNESS

Section 4.1, the results

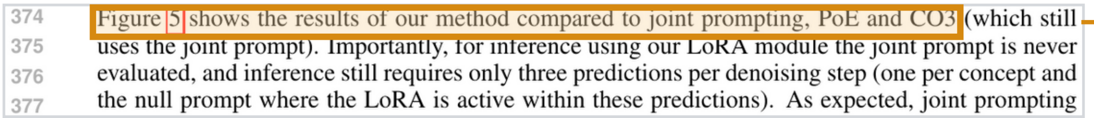

Figure 5 shows the results of our method compared to joint prompting, PoE and CO3 (which still uses the joint prompt). Importantly, for inference using our LoRA module the joint prompt is never evaluated, and inference still requires only three predictions per denoising step (one per concept and the null prompt where the LoRA is active within these predictions). As expected, joint prompting

results are image grids only

THE REVISED ANSWER

Table 1, Attend-and-Excite prompts

CLIP, BLIP-VQA, ImageReward

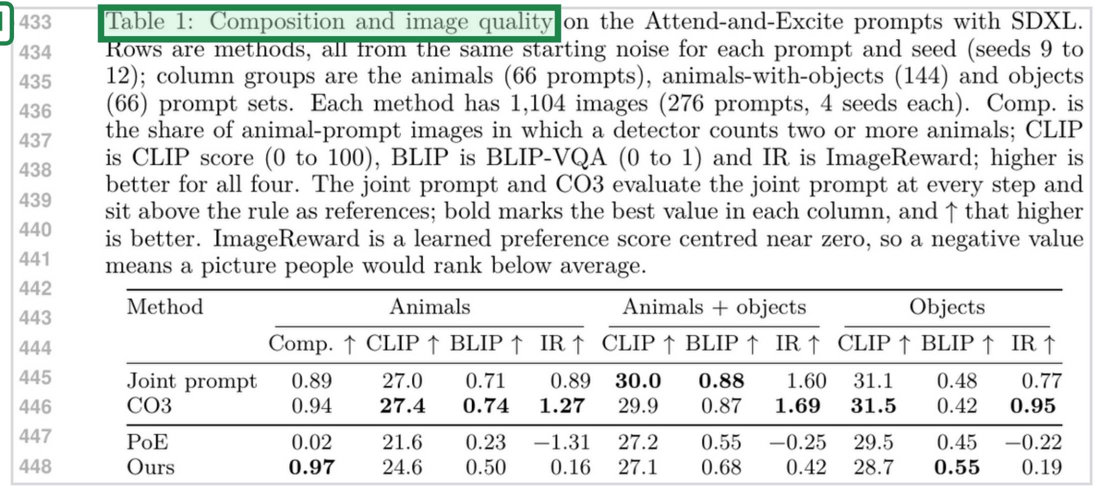

Table 1: Composition and image quality on the Attend-and-Excite prompts with SDXL. Rows are methods, all from the same starting noise for each prompt and seed (seeds 9 to 12); column groups are the animals (66 prompts), animals-with-objects (144) and objects (66) prompt sets. Each method has 1,104 images (276 prompts, 4 seeds each). Comp. is the share of animal-prompt images in which a detector counts two or more animals; CLIP is CLIP score (0 to 100), BLIP is BLIP-VQA (0 to 1) and IR is ImageReward; higher is better for all four. The joint prompt and CO3 evaluate the joint prompt at every step and sit above the rule as references; bold marks the best value in each column, and ↑ that higher is better. ImageReward is a learned preference score centred near zero, so a negative value means a picture people would rank below average.

Method	Animals				Animals + objects			Objects		
	Comp. ↑	CLIP ↑	BLIP ↑	IR ↑	CLIP ↑	BLIP ↑	IR ↑	CLIP ↑	BLIP ↑	IR ↑
Joint prompt	0.89	27.0	0.71	0.89	**30.0**	**0.88**	1.60	31.1	0.48	0.77
CO3	0.94	**27.4**	**0.74**	**1.27**	29.9	0.87	**1.69**	**31.5**	0.42	**0.95**
PoE	0.02	21.6	0.23	−1.31	27.2	0.55	−0.25	29.5	0.45	−0.22
Ours	**0.97**	24.6	0.50	0.16	27.1	0.68	0.42	28.7	**0.55**	0.19

Table 2, GenEval and T2I-CompBench

pending: slot R14

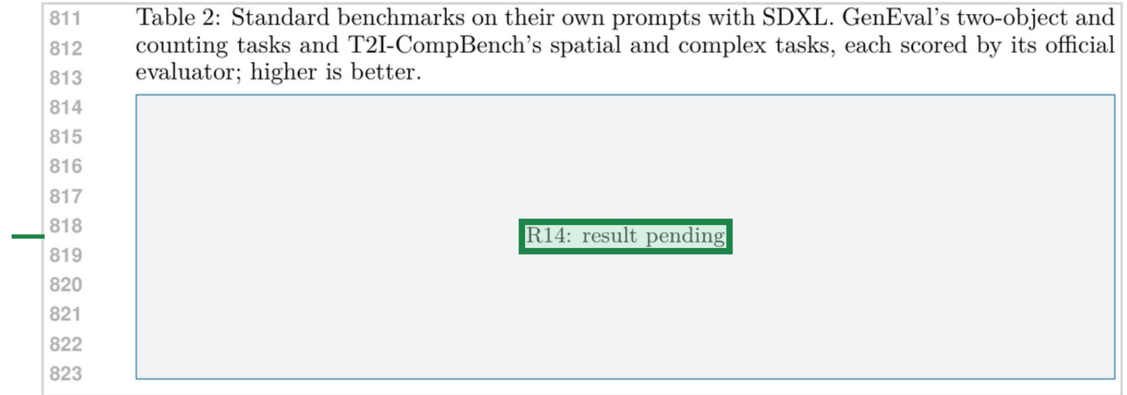

Table 2: Standard benchmarks on their own prompts with SDXL. GenEval's two-object and counting tasks and T2I-CompBench's spatial and complex tasks, each scored by its official evaluator; higher is better.

R14: result pending

paper/iclr-56173/build/iclr2027_conference.pdf (revised), page 16

The reply we plan to send (replies/prze.md: W1 and Q1)

pending: Table 2

W1: lack of quantitative benchmarks

The revision adds quantitative evaluation. Table 1 scores every method on the 276 Attend-and-Excite prompts with BLIP-VQA (the T2I-CompBench composition metric), CLIP score and ImageReward. Table 3 scores 53 held-out pairs with 95% intervals. Table 2 reports GenEval's two-object and counting tasks and T2I-CompBench's spatial and complex tasks with their official evaluators [TODO: slot R14].

Q1: quantitative benchmark

Answered under W1 and W2: Tables 1 to 4.

Table 2 (slot R14) is rendering on the RunPod pod; the page shows its placeholder until it lands. No number is estimated.

The PrzE Q1 reply says "Tables 1 to 4"; the revision has three tables. UHz6's reply to weakness 1 is on the G3 page. Every excerpt is a crop of a page render; the file and page are printed under it. Boxes mark text already on the page.
